

QUOTATION

React (MERN Stack) Website Redevelopment with Content Management Backend

QUOTATION FOR

**International Journal of Social Science,
Arts and Humanities Research (IJSSAHR)**

www.ijssahr.com

Attn: Editorial / Publishing Team

QUOTATION NO.

BMG/IJSSAHR/2026/010

Date: 16 July 2026

Valid Until: 15 August 2026

Prepared By: Anunay Kashyap, Operations Lead

1. Project Overview

Brandmingo Media Pvt Ltd proposes to redevelop the IJSSAHR journal website (currently a static PHP site) into a modern, fast, and easily manageable platform built on the MERN stack (React frontend + Node.js/Express backend + MongoDB database). The new platform will replicate and enhance all current functionality — journal information pages, issue archives, article abstracts with PDF downloads, editorial board listings, and manuscript submission — while giving the IJSSAHR team a secure admin panel to independently publish new issues, articles, and announcements without depending on a developer.

2. Scope of Work

2.1 Public-Facing Website (React)

Responsive, SEO-friendly rebuild of all existing public pages:

- Home — journal introduction, ISSN, latest announcements, recently published articles feed
- About Us
- Aim & Scope
- Current Issue — volume/issue listing with article abstracts
- Archive — past volumes and issues, filterable by year/volume
- Editorial Board — editor profiles (name, affiliation, country, bio)
- Instructions for Authors
- Mode of Payment
- Indexing — indexing/database logos and listing
- Copyright Form — downloadable document
- Contact Us — enquiry form with email notification
- Article detail view — abstract, author, country, expandable text, PDF download/view

2.2 Manuscript Submission System

Rebuilt as a secure, database-backed workflow (replacing the current static submission page):

- Author registration & login (email/password, JWT-based auth)
- Online manuscript submission form — title, abstract, keywords, author details, subject area, manuscript file upload (PDF/DOC)
- Auto-generated manuscript ID and email acknowledgement to author

- Author dashboard to track submission status (Submitted / Under Review / Revision Required / Accepted / Rejected)
- Email notifications to editorial team on new submissions

2.3 Admin / Content Management Backend

A password-protected admin panel for the IJSSAHR editorial team to manage the site independently:

- Manage Issues & Volumes — create new issue, set volume/issue number, month-year
- Manage Articles — add/edit/delete articles under an issue (title, authors, country, abstract, keywords, PDF upload)
- Manage Editorial Board — add/edit/remove board members and their profiles
- Manage Submissions — view, filter, download manuscripts; update status; add reviewer remarks
- Manage Static Page Content — edit text on About Us, Aim & Scope, Instructions, Mode of Payment, Indexing pages
- Manage Announcements — post/edit the homepage announcement banner
- Manage Contact Enquiries — view messages submitted via Contact Us form
- Admin user management with role-based access (Super Admin / Editor)

2.4 Technology Stack

- Frontend: React.js, responsive CSS (mobile/tablet/desktop)
- Backend: Node.js + Express.js REST API
- Database: MongoDB (Atlas)
- File Storage: Cloudinary / AWS S3 for PDF and image uploads
- Authentication: JWT-based secure login for admin and authors
- Hosting setup guidance for frontend, backend and database (client-owned hosting/domain)

3. What's Not Included

- Domain registration and hosting/server costs (billed directly to client's provider)
- SSL certificate procurement (guidance provided; cost borne by client if not already available)
- Content writing/proofreading for existing pages (existing site content will be migrated as-is; client to supply any new copy)
- DOI registration/CrossRef membership and indexing body applications (Scopus, UGC-CARE, etc.)
- Payment gateway integration (can be scoped separately if required for author processing fees)
- Plagiarism-checking software integration (e.g., Turnitin/iThenticate) — available as an add-on
- Ongoing maintenance, content updates, and hosting support beyond 30 days post-launch (AMC available separately)
- Mobile app development (web platform is fully responsive but this quote excludes native apps)

4. Timeline

Estimated delivery: 6–7 weeks from project kick-off and receipt of advance payment, subject to timely content, credentials, and feedback from the IJSSAHR team.

- Week 1–2: UI design, information architecture, database schema
- Week 3–4: Frontend development (public pages + submission system)

- Week 4–5: Admin CMS backend development and API integration
- Week 6: Content migration, testing, UAT
- Week 7: Revisions, final deployment and handover
